CR The sequence is that encoding the AGE-1 polypeptide. AGE-1 is capability involved in control of senescence. Reduced AGE-1 mediated signalling increases longevity complete abrogation causes developmental arrest. Agents that decrease expression or activity are used to increase longevity (delay the onset of age-related conditions) in a mammal. CR They can be used as pesticides (against insects and menatodes). CR They can be used as pesticides (against insects and menatodes). CR Since the agents target invertebrate diapause events, they are capabilities than compounds that inhibit neuro-transmission. CR Measurement of age-1 gene expression or AGE-1 protein activity can compounds that inhibit neuro-transmission. CR Le used in the determination of the longevity of an animal. CR Le used in the determination of the longevity of an animal. CR Le used in two-hybrid screens to identify proteins (potential modulators) that interact with AGE-1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          PT Eukaryotic cells transformed with mammalian phospholipid or protein kinase DNA - useful in assays for compounds involved in regulation and for treating cancers

PT cell growth regulation and for treating cancers

PS Disclosure; Fig 1; 71pp; English.

CC inositol (PtdIns) 3-kinase. This sequence was transformed into CC inositol (PtdIns) 3-kinase. This sequence was transformed into CC control (PtdIns) 3-kinase. This sequence was transformed into CC intheoryces pombe cells under the regulatory control of the nmt promoter in an embodiment of the invention. In the presence of thiamine the promoter is inactive and the cells carrying the PtdIns CC catalytic subunit plasmid grow as the parental strain. In the absence of thiamine the mmt promoter functions and the PtdIns 3-kinase catalytic subunit in induced. PtdIns activity is substantially CC increased under these conditions. Cellas containing constructs such as this, are useful in assays for detecting compounds involved in cell compounds for treating cancers and the formation of blood vessel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

Sclaim 7; Fig 9; 146pp; English.

Claim 7; Fig 9; 146pp; English.

Claim 7; Fig 9; 146pp; English.

Ca fragment of a PI3-kinase-encoding sequence and human cDNA isolated from a cDNA library constructed from mRNA isolated from the human cell line KGla. Positive clones were sequenced to give the human PI3 kinase pl10 sequence shown. This sequence has 95 percent homology with the bovine sequence. The domain encoding residues 19-100 of human pl10 is sufficient to encode the kinase which will associate with the p85 kinase subunit. The gene may be used to provide a protein with PI3 kinase activity, and is useful for screening for (ant)agonists of PI3 kinase activity which could be useful for stimulation or inhibition of cell proliferation and hence prophylaxis or therapy. Platelet or neutrophil activity or blood Sequence 3207 BP; 1028 A; 581 C; 680 G; 918 T;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
Practivity, useful for controlling cell proliferation
PS Claim 7; Fig 16; 146pp; English.

CS Southern blot analysis was performed using a bovine cDNA probe contg.

CA fragment of a PI3-kinase-encoding sequence and human cDNA isolated
CC from a cDNA library constructed from mRNA isolated from the human
CC cell line KGla. Positive clones were sequenced to give the human
CC pI3 kinase pil0 sequence shown. This sequence has 95 percent
CC homology with the bovine sequence. The domain encoding residues 19-
CC 100 of human pil0 is sufficient to encode the kinase which will
CC associate with the p85 kinase subunit. The gene may be used to
CC provide a protein with PI3 kinase activity, and is useful for
CC useful for stimulation or inhibition of cell proliferation and hence
CC prophylaxis or therapy. Platelet or neutrophil activity or blood
CC glucose levels can be controlled using the kinase.

PT 3-kinase-like activity, designated pilodelta - useful for controlling cell motility, particularly of metastatic cancer cells PT controlling cell motility, particularly of metastatic cancer cells PS Disclosure; Fig 9; 72pp; English.

CC The present sequence encodes a novel autophosphorylating protein controlling that has PI3 (phosphatidylinositol 3-hydroxy) kinase activity, and controlling that has PI3 (phosphatidylinositol 3-hydroxy) kinase activity, and controlling that has PI3 (phosphatidylinositol 3-hydroxy) kinase activity, and controlling that has PI3 (phosphatidylinositol 3-hydroxy) kinase activity, and controlling controlling that has PI3 (phosphatidylinositol 3-hydroxy) kinase activity, and controlling controlling metastatic cancer controlling controlling motility of cells. The protein increases motility while antisense controlling con

New phosphatidylinositol 3-kinase catalytic subunit - used to develop products for modulating kinase activity in immune system signalling and in carcinogenesis Claim 4; Page 27-33; 53pp; English.

This full-length composite cDNA encodes the pilo delta catalytic subunit (see W58570) of human phosphatidylinostiol 3-kinase. It was assembled from clone #249 obtained by PCR amplification (see W31341-44) of human peripheral blood mononuclear cell cDNA, clone M9528 obtained by screening a human macrophage cDNA library, and further clones obtained by RACE and PCR (see V31345-50). The following are claimed: (1) a purified and isolated polynucleotide
                                                                                                                                                                                                                                                                                                                                                                    12-OCT-1998 (first entry)

The products can be used to develop agents that modulating pl10 delta kinase activity and to develop (alagnostic reagents (claimed). They may also be used for detection and diagnosis of pl10 delta in a biological sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   3000

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  3059
```

ν,

Porcine phosphoinositide 30H-kinase p120 subunit cDNA.

G-beta-gamma regulated phosphatidylinositol-3' kinase; pig;
phosphoinositide 30H-kinase; p13K; signal transduction;
phosphatidylinositol (3,4,5)-triphosphate; G-protein; receptoransgenic animal; knockout animal; inflammation; arthritis;
septic shock; adult respiratory distress syndrome; pneumonia;
asthma; allergy; reperfusion injury; atherosclerosis; cancer;
Alzhelmer's disease; cancer; antisense; ribozyme; diagnosis;

receptor;

17-AUG-1998 (first entry)

therapy;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        phosphatidylinositol (3,4,5)-triphosphate in response to activation of trimeric g protein-linked receptors. This novel protein, which also contains a regulatory subunit, p101 (see V04633), is found in cells of haematopoletic origin and is involved in immune system responses which cause inflammation. p100 cDNA was obtained from a p19 neutrophil cDNA library using a degenerate oligonucleotide probe (see T99713) based on an isolated p120 tryptic peptide. The prize contains in pCMV3mycp120 is deposited as ATCC 97637. The invention encompasses pig and human p101 and p120 nucleotides, bost cell expression systems, p101 and p120 proteins (see W23946-49), fusion proteins, polypeptides and peptides, antibodies to these proteins, and transgenic animals and knockout animals. Compounds which are useful for treating inflammatory response and instruments of the protein of the compounds which are useful for treating assays using a G protein contains and contains and contains and protein of the pr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

Antagonists of 6 protein stimulated PI3K (acting through the p101 subunit, especially by disrupting the interaction between the p101 and p120 subunits) can be used to treat arthritis, septic shock, adult respiratory distress syndrome (ARDS), pneumonia, asthma, allergies, reperfusion injury, atherosclerosis, cancer and Alzhelmer's disease. The nucleic acids and their products can also be used for diagnosis, drug screening and clinical trial monitoring of inflammatory diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              pl01 and pl20 subunits - useful for diagnosis, drug screening, clinical trial monitoring and treatment of inflammatory disorders Claim 54; Fig 3A-C; 151pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 library using PCR primers corresponding to amino acid sequences KNGDDLR and HIDFG. The amplified fragment was used to probe a humar U937 cell cDNA library and several overlapping clones were isolated. The largest clone had the present sequence and coded for a protein of 1049 residues. The protein is a novel phosphatidylinositol 3-kinase (PIJSK) that differs in its regulatory mechanism from the kinase (PIJSK) that differs in the residues. The new enzyme has been known PIJK alpha and beta enzymes. The new enzyme has been
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 5; Page -; 10pp; German.

New nucleic acid encoding phospho:inositol kinase 3-C2 alpha or its fragments - useful for, e.g. treatment of tumour cells where phenotype is associated with expression of kinase

Claim 1; Fig 1; 52pp; English.

The present sequence encodes a human class II phosphoinositide lipid The present sequence encodes a human class II phosphoinositide a class II (P13) kinase designated PIK3-C2alpha. It is characterised as a class II (P13) kinase designated PIK3-C2alpha. It is characterised murine and (P13) kinase designated PIK3-C2alpha. It is characterised as a class II (P13) kinase designated PIK3-C2alpha. It is characterised as a class II (P13) kinase designated PIK3-C2alpha. It is characterised as a class II (P13) kinase designated PIK3-C2alpha. It is characterised as a class II (P13) kinase designated PIK3-C2alpha in the conserved C2 domain found in murine and (P13) kinase designated PIK3-C2alpha in the conserved C3 domain found in murine and (P13) kinase designated PIK3-C2alpha in the conserved C3 domain found in murine and (P13) kinase designated PIK3-C2alpha in the conserved C3 domain found in murine and (P13) kinase designated PIK3-C2alpha in the conserved C3 domain found in murine and (P13) kinase designated PIK3-C2alpha in the conserved C3 domain found in murine and (P13) kinase designated PIK3-C2alpha in the conserved C3 domain found in murine and (P13) kinase designated PIK3-C2alpha in the conserved C3 domain found in murine and (P13) kinase designated PIK3-C2alpha in the conserved C3 domain found in murine and (P13) kinase designated PIK3-C2alpha in the conserved C3 domain found in murine and (P13) kinase designated PIK3-C2alpha in the conserved C3 domain found in murine and (P13) kinase designated PIK3-C2alpha in the conserved C3 domain found in murine and (P13) kinase designated PIK3-C2alpha in the conserved C3 domain found in murine and (P13) kinase designated PIK3-C2alpha in the conserved C3 domain found in murine and (P13) kinase designated PIK3-C2alpha in the cons
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             3430
                                                                                                                                                                                                     kinase due to the presence of a conserved C2 domain found in murine and Drosophila class II P13 kinases, its apparent lack of a p85 binding site and a substrate affinity to inositol lipids PtdIns and PtdIns(4)P. The protein has resistance to P13 kinase inhibitors Wortmannin and 1x294002. Antibodies against the protein (optionally humanised), are used to identify class II P13 kinases. Antisense sequences, antibodies or dominant negative mutants of the P13-C2alpha protein, are useful in human or veterinary medicine to block class II kinases. They can be used to treat tumour cells where the phenotype is associated with expression of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               3256
